 · **Aspiration hazard** Based on available data, the classification criteria are not met.

 · **Information on likely routes of exposure**

Exposure to hydrochloric acid is possible during occupational handling due to contact with the skin and inhalation of vapors.

The main intake pathway is considered to be via the respiratory tract.

Gastrointestinal tract: Specific kinetic studies are not available. They are considered not necessary because gastric juice already contains a high concentration of hydrochloric acid which is physiologically conditioned. Following ingestion, local effects are therefore of priority. [GESTIS]

 · **Additional toxicological information:**
CAS: 7647-01-0 hydrochloric acid

(source: GESTIS)

Main toxic effects

Acute: Irritation and corrosion to the eyes, airways and skin, danger of severe damage to the eyes and lungs, following ingestion, concentration-dependent damage to the gastrointestinal tract

Chronic: Airway diseases, damage to the teeth, gastrointestinal disorders

Further Information:

The acute action of hydrochloric acid is based on the locally damaging effects on contacted tissues which are primarily dependent on the concentration. Following repeated contact with the skin, even diluted hydrochloric acid can cause skin damage (reddening, drying, fissures, dermatitis). The critical effect following repeated inhalative exposure is irritation to the respiratory tract.

 · **11.2 Information on other hazards**

 · **Endocrine disrupting properties** The product does not contain substances with endocrine disrupting properties.

 · **Other information**

Other dangerous properties can not be excluded.
